

Conecuh National Forest

PUBLIC NOTICE

Prescribed Burn

(Andalusia, AL) February 8, 2024---- USDA Forest Service federal fire management specialists are planning to conduct two prescribed burns (controlled burns) on 110 acres today. The burns are 1.5 miles west of Wing, north of Highway 4.

Prescribed burns are low-intensity fires ignited by trained personnel to remove excess fuels, such as vegetation and dead wood, which would enable wildfires to burn hotter and longer.

During today's prescribed burn the public may notice Forest Service fire crews and equipment. Smoke may also be visible from Highway 4, and 137. The wind is expected to be out of the southeast and carry smoke to the northwest.

Some settling may occur around the general area of the burn. If encountering smoke on roadways, please slow down, turn on your low-beam headlights and use caution when encountering prescribed burning operations and smoke.

Prescribed fire plays a significant role in the health of forest ecosystems. Applying prescribed fire on the land at the right place, at the right time, under the right conditions benefits the land and the surrounding communities.
